

# REL-PAC®

## NATURAL CELLULOSIC POLYMER

### DESCRIPTION

REL-PAC is a non-fermenting granular polymer designed for building a low solids drilling fluid with increased borehole stability. REL-PAC is a highly dispersible polymer, which prevents the formation of hard lumps or fish eyes, for maximum product efficiency.

### RECOMMENDED USE

REL-PAC is designed to increase borehole stability in a variety of rotary and horizontal drilling applications.

### CHARACTERISTICS

- Controls filtration rate and assists in forming thinner, less permeable filter cake
- Encapsulates solids for a total lower solids system
- Highly dispersible
- Improves fluid viscosity for effective removal of drill cuttings
- May be used in fresh or saltwater conditions
- Stabilizes drilled formations

### MIXING AND APPLICATION

Mix at low shear through a mud hopper to avoid lumping and to minimize waste. Add 0.5 to 1.5 pounds of REL-PAC per 100 gallons of existing bentonite drilling fluid for hole stabilization.

### PACKAGING

25-2 lb plastic bags per case, 20 per pallet or 50 lb bags, 40 per pallet. All pallets are plastic-wrapped.
